Info Session Outline

- Network Exploration
- Network Visualization Tools
- Course Outline
- Individual Sessions (Wednesday 3–5 pm UK)
- Questions & Discussion
- >> *put your questions in the chat*

Network Exploration

Introduction

What is network exploration?

- Exploratory Data Analysis (EDA), 1970s
- Visualizations for exploration
- Multiple views / perspective
- Interactive iterative interrogation
- Hypotheses generation
- Informing analysis, cleaning
- Curiosity
- > not pure analysis
- > not visualization for communication

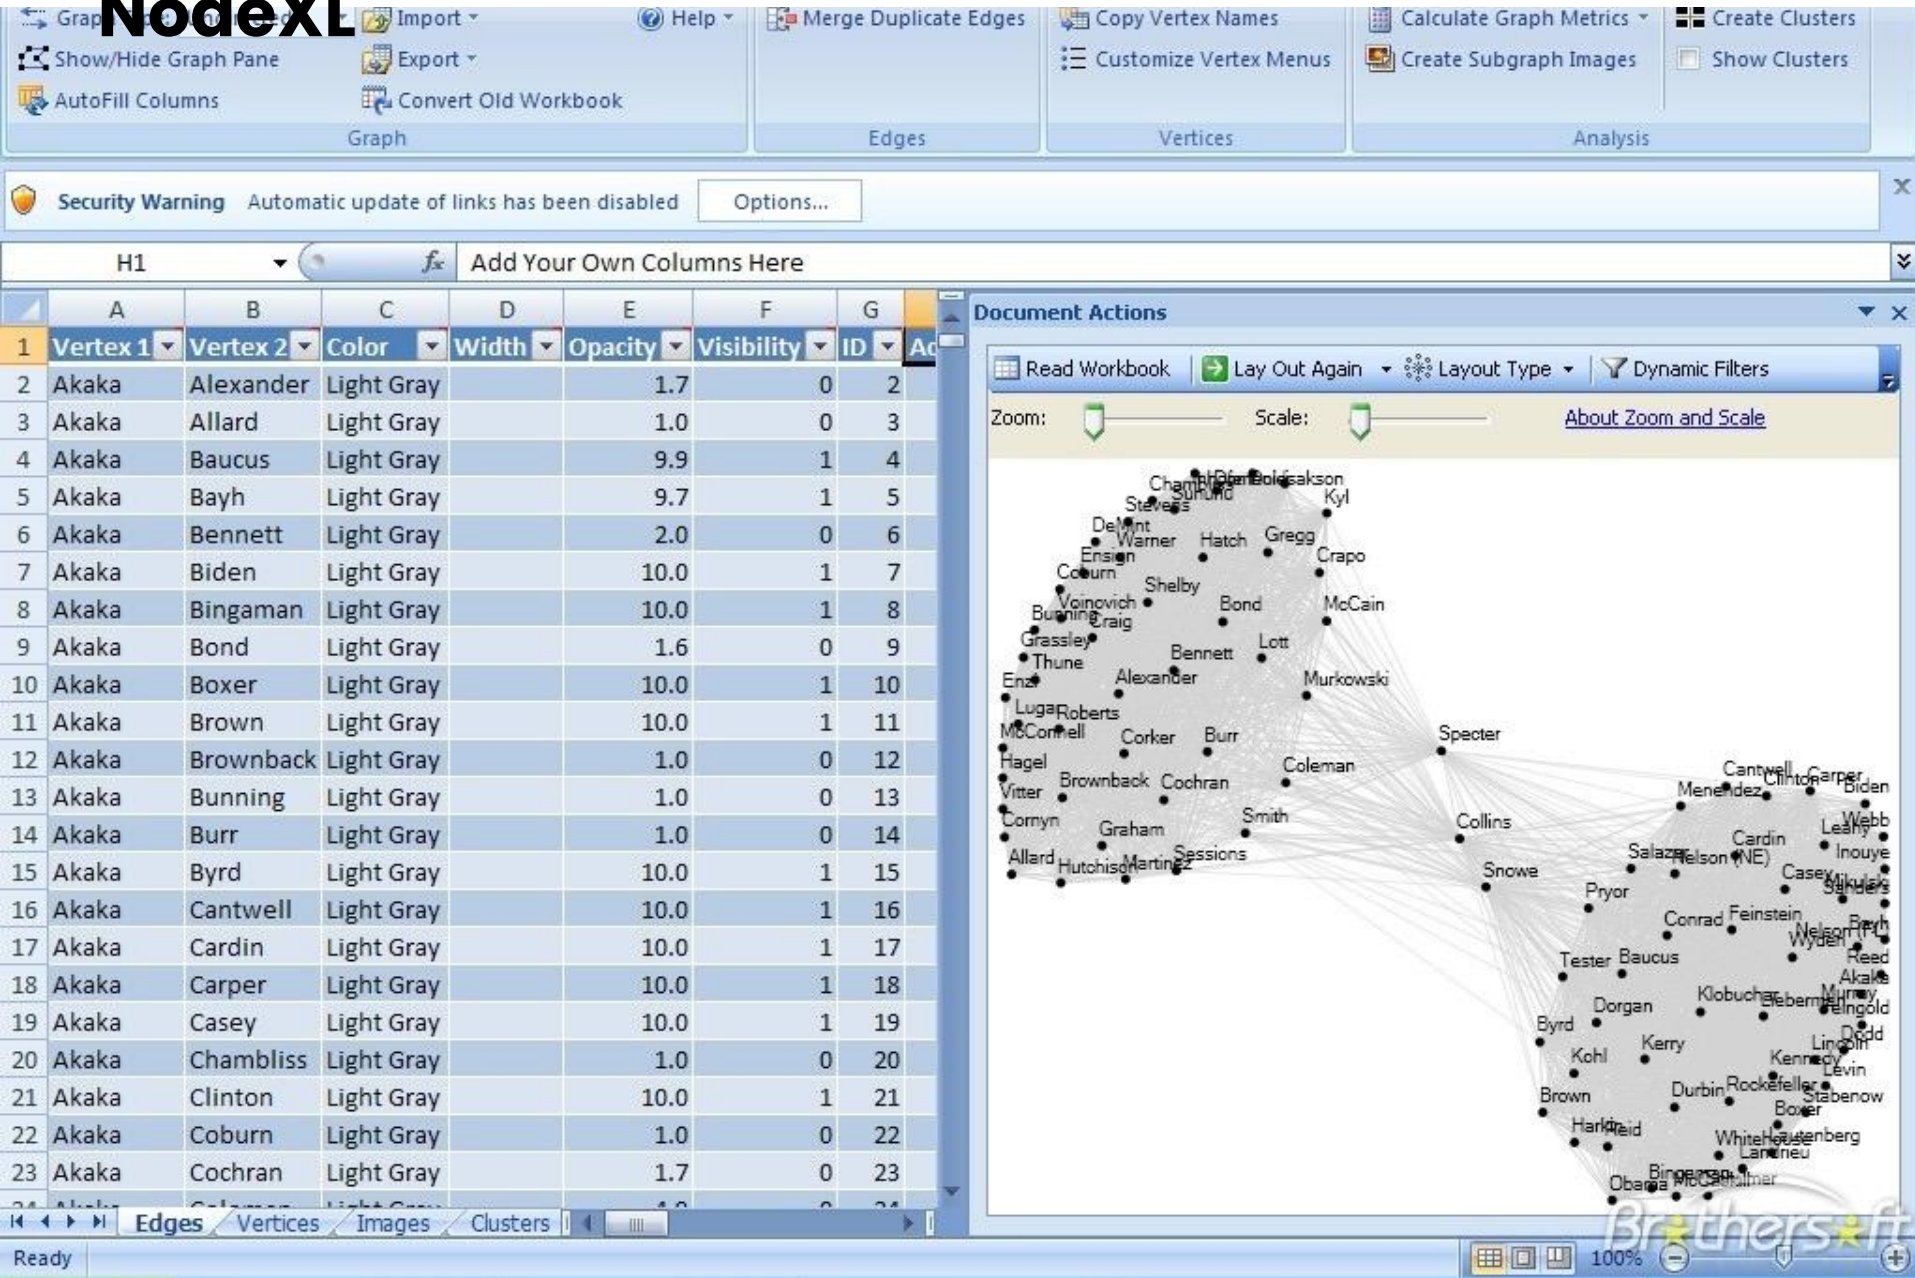

Steps in Exploration

- data collection
- **data formatting / shaping**, *making data machine readable*
- **data cleaning** *duplication, time formats*
- **define a network**, *what are my nodes and links?*
- **visualization for exploration**
- quantitative data analysis

Common Questions on Network Visualization

- What type of file format should I use for my data?
- How can I format my data to visualize as a network?
- How can I decide what to use: node table or link table?
- What is the best visualization type to explore my network?
- How to read a network visualization?

Course Overview

Course Goals

During the course, you will learn to

1. **Structure your network data and prepare it** for visualization with the Vistorian.
2. **Define goals of your exploration** and what you aim to learn about your network data using visualizations.
3. **Know a range of network visualizations**, through theory and hands-on use.
4. **Use different types of interactive visualizations** to explore your data.

Intended Audience

- People with network data
- People who are in the process of collecting network data
- Everyone at an early or later stage in their analysis

- *No need to have data properly formatted.*
- *No need to have data already.*

Course Prerequisites and Requirements

- **No technical or programming skills** are required.
- **No pre-knowledge in network analysis of terminology** is required.
- No need to install any software.

Dataset selected for Hands-on Activities

- Ideally, **participants to be working with their own network data during the course.**
 - If you do not have your own dataset, we can provide you with demo data.
- Your data should **not be too large as any visualization of large data sets** is challenging in itself.
 - An ideal size for the course is up to *500 links in your network.*
- To know more about the data types and features a network might contain, please check the course webpage <http://vistorian.net/courses>

Key Information

- The course is **free of charge** and open to everybody.
- We have a *limited number of 20 places*.
- The course includes **a 2-hour session on Wednesday of each week and for 5 weeks (Jan 12–Feb 9, 2022)** and ***may require potentially more time at home*** to prepare and work with your data
- The course combines:
 - brief lectures,
 - hands-on activities,
 - discussions,
 - individual support (drop-in sessions TBA)

Sessions by Week

Network Data Preparation

Week 1 – 12th Jan 2022

- Role of Visualizations in Network Exploration
- A set of hands-on exercises to help you define potential network relations in your data and your research questions:
 - What is your network about?
 - What is your network's data model?
 - How can you format your network data?
 - Working with tables (bring your own data)
 - How to choose your exploration variables?

Data Shaping Techniques and Challenges

Week 2 – 19th Jan 2022

- Data types in your network
- Ensuring consistency of your data
- Tools to assist in checking data consistency
- Common challenges in network visualizations:
 - What if my network is too large to visualize?
 - What if my data contains semi/unstructured data?
- Techniques in preparing your data
- Preparing your exploration plan

Week 3 - 26th Jan 2022

- Reading topological structures in node-link diagrams
- Exploring the temporal evolution of your network,
- Encoding additional attributes through
 - Multiple links
 - Weighted links
 - Directional links
 - Link and node types

Adjacency Matrices

Week 4 – 2nd Feb 2022

- Reading network structures from an adjacency matrix
 - Temporal evolution of your network
 - Multiple links
 - Weighted links
 - Directional links
 - Link and node types.
- We will also explain matrix ordering algorithms that help you reveal clusters and highly-connected nodes.

Week 4 - 2nd Feb 2022

Week 4 - 2nd Feb 2022

Timeline, Map, and Multiple Views

Week 5 – 9th Feb 2022

- **Timeline visualization**

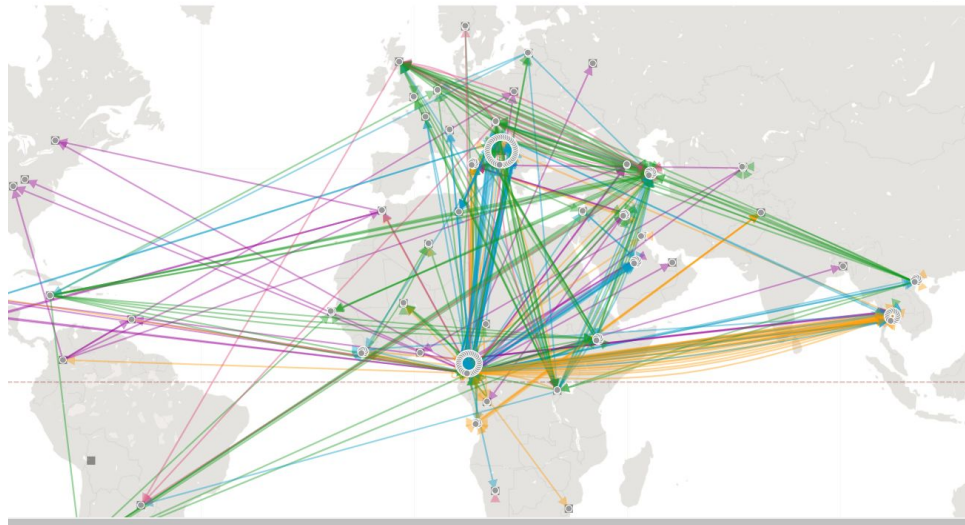

- How to read time arcs?
- Visual encodings
- Ordering and temporal changes

Timeline, Map, and Multiple Views

Week 5 – 9th Feb 2022

- **Map visualization:**
 - What is geographical data?
 - When and why to use a map?
- **Interactions and Multiple Views:**
 - How can multiple views support your analysis
 - Static views vs. Interactive views

Registration

- The registration link :
<https://forms.office.com/r/qAnvASgRyJ>
- will take you to a form which will take between 5-15 mins to complete
- By registering to the course you:
 - must consent to the ethics form provided in the registration form.
 - plan to attend to all 5 sessions.
 - ensure that you have read all of the key information mentioned above

Ethics & Data Collection

- This course is part of a research project which was approved by the Ethics Board of the School of Informatics *Approval #2019/67905*
- All approved ethics-related documents can be found at: <http://vistorian.net/courses> including:
 - Participant Information Sheet
 - Participant Consent Form
- All information collected about you will be kept strictly confidential. All data will be anonymized.
- Your data will be processed in accordance with Data Protection Law.

Questions & Contact

- Course **Webpage** (*check for updates*):
